CATHODE-RAY TUBE IMPLOSION-PROOF ADHESIVE MESH TAPE AND USES THEREFOR

5

ABSTRACT OF THE DISCLOSURE

Implosion-proof mesh tape is constructed by covering
the surface of a mesh-like fabric matrix with a hot-melt
adhesive and then coating it with a pressure-sensitive
adhesive. It is thereby possible to obtain a cathode-ray
tube with an implosion-proof structure wherein the
surfaces of the fiber matrix directly contact with both a
metal clamping band and the glass panel.
